NEWSLETTER

THE VIBE OF DIAMONDS

When first designing our newsletter, we had a decision to make. Did we want to focus on the New Premier Projects we were working on or did we want to go behind the scenes and highlight some of the projects we were called in on to provide solutions for vibration and/or noise problems.

We chose the latter, as this will be beneficial to our clients in two ways:

- To help clients who may have or had these experiences and not known who to call
- To make our broad base of our clientele aware of the expertise we have developed in fixing trouble jobs

This first article we have titled "The Call of Last Resort".

Cooks Childrens Fort Worth Texas
Provided: vibration / noise control

City Center towers Fort Worth Texas
Provided: vibration / noise control

Providence towers Dallas Texas
Provided: vibration / noise control

AT&T Stadium
Provided: vibration / noise control

The Call of Last Resort!

It was the week before Thanksgiving and everything was great. We were preparing for the family holiday. Then we received a call stating that an inertia base we provided for a twin-cylinder, high-pressure, piston-driven, process air compressor located in a semiconductor plant, was allowing excessive movement and destroying braided stainless steel flexes in the attached piping.

MANUFACTURER'S CORNER

HUMOR

Mason Stainless Steel Stock Hoses and Expansion Joints are safe for the New NSF-372 drinking water requirements

We were all excited by approval of the UL (Underwriters Lab) as manufacturers of NSF-61 low lead requirements for drinking water, but quickly dismayed to find NSF-61 was phasing out to an upgraded NSF-372. However, somebody up there loves us as we are the first company in the industry to be approved for the new NSF/ANSI-372 listing with the even lower lead limits for drinking water.
